

# DELIVERY SPECIFICATIONS

## **Delivery specifications**

It is important to provide files in vectors (such as .eps and .ai). Due to the printing process and working with PMS colours, a logo in pixel format (such as .jpg, .png and .bmp) is not sufficient.

### **Illustrator version Creative Cloud or lower**

- File entirely formatted in vectors. Indication of used fonts.
- Supply imported / enclosed images separately.
- Colour code tape in PMS Coated.
- Colour code label in PMS Uncoated.

### **PDF**

- Delivery in PDF is also possible, provided that this is made from a vector file.

If it concerns a full colour printing, there can of course be an image in pixel format. In this case, please bear the following delivery specifications in mind:

### **Photoshop version Creative Cloud or lower**

- Images as a tiff in CMYK
- Min. 300 Dpi at 50 mm height - No DCS files
- Raster at least at 10%

### **PLEASE NOTE!!**

Logos in png, jpg and bmp can, if necessary, be copied, but extra drawing costs will be charged for this.
